

Preface

OBD Boost and its developer, Zack Fletcher, respect your privacy and do not collect any personal information.

What we collect

OBD Boost may report the following anonymous statistics about how each device uses the app, and that information may be stored on Zack Fletcher's server for aggregate analysis:

1. New Installation
2. App usage time (approximate time from app launch until the user backgrounds the app)

How we can use the data we collect

OBD Boost and its developer use aggregate usage statics to inform business decisions, such as how much time should be devoted to improving OBD Boost's features. The developer agrees not to knowingly share any data collected with any third party, except in aggregation (i.e. never by device or user, but only as the whole body of users, worldwide).
